RULES

GENERAL INFORMATION

GRIMLORE is a game of adventure, exploration and thrilling combat in a dark fantasy world that has been ravaged by a cataclysmic event.

GRIMLORE can be played by 1 to 4 players.

BACKGROUND STORY

In the bygone era, the world was a tapestry of mighty continents and flourishing civilizations, thriving under the benevolent gaze of the stars. Yet, as the ancients foretold, a cataclysm of unfathomable might struck, tearing the very fabric of the earth asunder. Continents shattered like glass under the celestial hammer, leaving in their wake a fragmented world of isolated isles, scattered like cosmic dust across the relentless, churning sea.

For millennia, these isles became cradles of divergent cultures, each evolving in seclusion, their people's eyes turned skyward, yearning for a connection long severed. The seas, roiling with unspeakable leviathans and eldritch monstrosities, forbade passage, swallowing whole any vessel daring enough to breach their cursed depths. Mariners who dared the crossing returned, if at all, with souls hollowed by terror, their whispers seeding legends of waterborne horrors and abyssal beasts.

At the heart of each island, veiled in myth and enigma, stood an ancient portal, a relic of a forgotten age. These arcane structures, dormant and silent through the eons, were the subject of legend and superstition. They were the remnants of a lost unity, a fractured bridge to a once-unified world.

Then, under the auspices of an ominous celestial alignment, a pulse of primal energy surged through the cosmos. The portals, long inert, stirred from their ageless slumber. With a resonance that echoed through the bones of each isle, they awakened. Ethereal light spilled from their archaic runes, casting otherworldly shadows, and the air thrummed with the power of ancient magics rekindled.

This awakening heralded a new epoch. It beckoned the brave and the curious to step through these revived gateways, to traverse the once-forbidden seas not by sail, but through the veils of reality itself. It promised a renaissance of exploration and discovery, where lost civilizations could reconnect, long-separated families could reunite, and the scattered fragments of history could be pieced together.

But with the resurgence of these portals came the whisper of forgotten secrets, the resurgence of lost dangers, and the stirring of slumbering threats.

PARTY ROSTER

If you play on your own, grab a **Party Sheet**. Give your party a name. Your party starts with 0 in all resources. Put the name of your main character into the first row of the roster table, including their name, race, and general role.

If you play in a group, decide on your party's name together and add one character per player to the roster.

There is no limit to the number of characters on your roster, but an active party must be 4 or less characters. The game will scale based on the number of characters and their experience.

The party's members can only be changed when the party is in the Portal Complex.

CHARACTERS

When you create a new party, there will only be one character (if you play alone, otherwise it will be characters in the number of players) in your roster. This is your main character that you start the game with.

Grab a **Character Sheet** and fill out the character a name, race, and role, according to what you put on the party sheet.

All the attributes and skills start at 1D6. Now you can choose one attribute and one skill that you can learn to 2D6. This represents previous experience and specializations of the character.

Now look through the **Basic Treasure Table**, choose one item and note it down on the back of the character sheet. It is recommended to choose a weapon.

Leave **Traits** empty for now, your character can acquire these later by using **Experience Points**.

CHARACTER RACES

The world of **GRIMLORE** is full of fantastic and strange races. Your character can be of any race that you want. Feel free to use your favorite existing race or make some up! Choose one of the Character Traits as a starting trait for your character. Choose one that fits your desired race. Here are some suggestions:

Race	Starting Trait	Description
Human	Destined	+1 Destiny Token
Elf	Knowledgeable	+1 on any Lore check
Dwarf	Crafter	+1 on any Crafting check
Orc	Indomitable	+1 Energy
Halfling	Nimble	+1 on any Evade check

RACIAL TRAITS

DESTINED

The character is destined to complete great deeds. Their maximum Destiny is raised by 1.

KNOWLEDGEABLE

The character has learned and studied a lot during their life in the Portal Complex. They gain advantage on any Lore test.

CRAFTER

The character has trained and practiced a lot of crafting during their life in the Portal Complex. They gain advantage on any Crafting test.

INDOMITABLE

The character has an above-average physique and can take more of a beating than your average person. The gain +1 maximum Energy.

NIMBLE

The character is very fleet footed and receives advantage on all Evade tests.

CHARACTER ROLES

Character Roles are a loose definition of the role that your character will take. This does not affect anything, as your choice of Attribute and Skills will matter a lot more in actual play. This is just an indicator of what you originally have in mind for your character. Some examples would be *Adventurer, Fighter, Mage, Rogue, and Cleric*.

Feel free to invent your own and to change this at any time as you refine your character's gear, skills, and attributes.

CHARACTER PROGRESSION

During their adventures, the party will accumulate Experience Points (XP) that are tracked for the whole party.

A character can choose to spend XP to enhance their attributes and skills, or to purchase a Character Trait.

Skill/Attribute	Current #	New #	XP Cost
Skill	1	2	4
Skill	2	3	6
Skill	3	4	8

Attribute	1	2	8
Attribute	2	3	10
Attribute	3	4	12

For the XP costs of trait, see the section below.

CHARACTER TRAITS

Once a character has levelled up a skill to 3, they can start buying character traits that are connected to that skill.

Below is list of traits for each skill:

ALL SKILLS

EXPERTISE

COST: 3 XP PER LEVEL, MAX 3

This trait can be acquired for each skill and will add 1 to your maximum dice pool per level (6 dice at level 1, up to 8 dice at level 3).

REAPER

COST: 5 XP

When the character kills an enemy, they gain 1 Energy.

1-HANDED

CLEAVE

COST: 5 XP

After acquiring this trait, characters can spend their overflow damage after killing an enemy to damage other enemies that are engaged to them.

RIPOSTE

COST: 5 XP

Once per enemy combat round, the character can riposte a defended attack onto the attacker, gaining a free attack.

BLADEDANCER

COST: 5 XP

The character can spend 1 Energy to attack all engaged enemies at once. Roll an attack for each engaged enemy.

2-HANDED

THUNDERSTRIKE

COST: 3 XP PER LEVEL, MAX 2

When this character hits an enemy with their weapon, they can choose to knock back the enemy a number of tiles up to the level of this trait.

CLEAVE

COST: 5 XP

After acquiring this trait, characters can spend their overflow damage after killing an enemy to damage other enemies that are engaged to them.

STEADFAST

COST: 3 XP PER LEVEL, MAX 3

The character becomes immune to CC effects like Knockback, Pull, etc. from enemies up to their trait level (1: easy, 2: medium, 3: hard). Does not work on bosses.

DEFEND

TAUNT

COST: 3 XP

Once per enemy combat round, the character can taunt one enemy at the beginning of their turn to attack the character instead of its usual target. If the enemy is not in attack range, they will disengage their current target (if any) and move into attack range of the taunting character.

LAST STAND

COST: 3 XP PER LEVEL, MAX 3

When this character is brought to 0 Energy, they immediately gain back Energy in the amount of this trait's level. This can only happen once per game session.

BASH

COST: 3 XP PER LEVEL, MAX 3

Once per enemy combat round, if the character successfully defends against an attack, they can roll a number of dice according to this trait's level. If they score a success, the attacking enemy will be stunned and skip their next combat turn.

CRAFTING

TALENTED

COST: 5 XP

Even when rolling no 6s when crafting an item, the crafted item will at least have its usual 1 Upgrade or Enchantment slot (check the Crafting System rules).

SCAVENGER

COST: 5 XP

The character gains 1 additional Ore when successfully scavenging.

INVENTIVE

COST: 10 XP

The character does not need to be in a Settlement to deconstruct or craft items.

RANGED

RICOCHET

COST: 5 XP

After acquiring this trait, characters can spend their overflow damage after killing an enemy to damage other enemies that are within 3 tiles of the killed enemy.

WINDRUNNER

COST: 10 XP

After killing an enemy, the character can move one additional tile, even when engaged.

LONGSHOT

COST: 5 XP

The range of the equipped weapon is increased by 1. Only works with Ranged Weapons.

EVADE

SHADOW STEP

COST: 10 XP

After a successful Evade, the character can immediately move an additional tile, even when engaged.

UNTOUCHABLE

COST: 3 XP PER LEVEL, MAX 3

The character becomes immune to CC effects like Knockback, Pull, etc. from enemies up to their trait level (1: easy, 2: medium, 3: hard). Does not work on bosses.

BLINK STRIKE

COST: 5 XP

Once per enemy combat round, the character can counter-attack a defended attack onto the attacker, gaining a free attack.

MECHANICS

PICKPOCKET

COST: 10 XP

When arriving in a Settlement, the character can roll an **AGILITY & MECHANICS** skill check. If successful, they acquire an item from the Basic Item category (see table at the back). If unsuccessful, the party receives Disadvantage on the needed skill roll in the Settlement.

ENGINEER

COST: 5 XP

Once per game session, the character can pass an **AGILITY & MECHANICS** skill automatically.

MAGITECH

COST: 10 XP

The character can now enchant proper items that cannot be enchanted (basic weapons and armor with no essence cost). The cost is twice its normal Upgrade cost.

STEALTH

BACKSTAB

COST: 10 XP

The character gains Advantage when they attack an enemy that is already engaged to another character.

SHADOWMELD

COST: 5 XP

Once per combat, the character can vanish from the sight of an enemy that would normally approach and/or engage them, causing the enemy to move to the next valid target instead.

SHADOW

COST: 5 XP

Once per game session, the character can pass an **AGILITY & STEALTH** skill automatically.

MAGIC

ELEMENTAL MASTERY

COST: 10 XP

Choose an Element. Spells of that element deal 1 additional damage.

ARCANE SHIELD

COST: 5 XP

Once per combat, when hit, roll an ARCANES & MAGIC skill test, and gain as many temporary Energy-Shield points as you rolled successes.

NETHER SWAP

COST: 10 XP

Once per combat, you can switch position with an enemy or ally, potentially positioning foes for a tactical advantage.

DIVINE

DIVINE INTERVENTION

COST: 10 XP

Once per game session, you can prevent a successful attack against an ally by teleporting them next to you and healing 3 Energy.

BLESS WEAPON

COST: 10 XP

At the start of each combat encounter, you can bless the weapon of any ally. That weapon will deal 1 additional Divine damage for the remainder of the combat encounter.

DIVINE ASCENDANCE

COST: 5 XP

When using a Healing Spell, you can spend additional Energy to heal your target at a 1-to-1 ratio.

LORE

ANCIENT SCHOLAR

COST: 5 XP

The character gains 1 additional Essence when successfully scavenging.

RUNE DECRYPTION

COST: 5 XP

Once per game session, you can pass an ARCANE & LORE skill check automatically.

RELIC HUNTER

COST: 10 XP

Once per game session, upgrade any ADVANCED ITEM treasure to a MAGIC ITEM treasure.

INSIGHT

DETECT WEAKNESS

COST: 5 XP

Once per game session, at the start of a combat encounter, you can either downgrade an enemy immunity to a resistance or negate a resistance.

AURA READING

COST: 5 XP

Once per game session, you can pass an **ARCANE & INSIGHT** skill check automatically.

CRYPTIC VISIONS

COST: 10 XP

All Clue costs are reduced by 1 for this character, with a minimum of 1 (can't reduce the cost to 0).

LEADERSHIP

TACTICIAN'S AURA

COST: 5 XP PER LEVEL, MAX LEVEL 3

At the beginning of each combat encounter, the party gains temporary (they are removed after the encounter) Advantage Tokens equal to the level of this talent.

EMPATHIC LEADER

COST: 5 XP

Once per game session, you can pass a **SOCIAL & LEADERSHIP** skill check automatically.

HEROIC INTERVENTION

COST: 10 XP

Once per game session, rush to an ally and take a hit for them.

NATURE

NATURE'S BOUNTY

COST: 5 XP

The character gains 1 additional Organics when successfully scavenging.

HERBAL LORE

COST: 5 XP

Once per game session, you can create a potion that heals for a number of successes on your SOCIAL & NATURE skill roll. Can be used on allies.

SPIRIT OF THE WILD

COST: 10 XP

Once per game session, you can heal yourself for 3 Energy.

PERSUADE

SILVER TONGUE

COST: 5 XP

Once per game session, you can pass a SOCIAL & PERSUADE skill check automatically.

MASTER NEGOTIATOR

COST: 10 XP

Once per game session, you can upgrade an Advanced Item reward to a Magic Item.

WORD OF PEACE

COST: 10 XP

Once per game session, you can skip a combat encounter (not a Boss Battle).

INTIMIDATE

TERRIFYING ROAR

COST: 10 XP

Once per combat, you can make an enemy up to 3 tiles away skip their turn by stunning them with your roar.

REPUTATION OF DREAD

COST: 5 XP

Once per game session, you can pass a SOCIAL & INTIMIDATE skill check automatically.

THREATENING Demeanor

COST: 5 XP

Once per game session, you can upgrade a Basic Item reward to an Advanced Item.

STARTING THE GAME

GRIMLORE has two modes: *campaign mode* and *free-roam mode*.

If you start in free-roam mode:

1. Every player takes their **Character Sheet**.

2. Choose if you want a **short or long session** (see below).
3. Divide the Books of Lore (Wilderness, Dungeon, Settlement and Bestiary) amongst the group of players.
4. Decide who begins the game session and becomes the **Active Player**.
5. Start the first Game Round as described under *Game Round*.

If you start in campaign mode (*Expansions-only*):

1. Every player takes their **Character Sheet**.
2. Decide who takes the Campaign Book and becomes the **Active Player**.
3. Read passage #01 from the Campaign Book out aloud.
4. Follow the instructions in the text.

GAME LENGTH

Length	Amount wilderness	Amount settlement	Amount dungeon
Short	3	2	1
Long	6	4	2

Multiply these values by the number of characters.

GENERAL GAME MECHANICS

PERFORMING TESTS

To perform any skill test, take a total number of **black D6** according to the attribute and skill combination.

If you gain **Advantage** on the test, take another **black D6** for each point of advantage that you get (*but only one from each source*).

If you suffer **Disadvantage** on the test, add a **red D6** for every disadvantage you get to your dice pool (*but never more than one from each source*). *If the party has gained Disadvantage Tokens, one **must** be used per test until no tokens are left.*

If the test is affected by a **Negative Modifier** (the card will say so), take the indicated number of **red D6** and add them to your dice pool.

In any test, there can be a maximum of 5 black dice and 3 red dice. This can be raised further by acquired character traits.

Roll your dice pool and count the number of black 6s and red 6s. Subtract the number of red 6s from the number of black 6s to get the total amount of successes.

If you have at least 1 success, the test is successful. If you have 0 or less successes, the test was unsuccessful.

If you have **2 or more** successes, the test was a critical success. The party receives **1 Experience Point**.

Keep in mind that players can spend their character's Destiny Points to reroll dice in dire situations.

Also keep in mind that the skill checks given in the passage are just recommendations. Feel free to come up with your own combination of attribute and skill for an event and narrate it out. This is encouraged!

CHARACTER ACTIVATIONS

When a character has performed a skill test, they can't perform another skill test until all the other characters have also performed a skill test. A character can spend a **Destiny Point** to refresh their "Activation" at any time.

GAME ROUND

A Game Round starts with the Active Player taking their turn (see below). After they are done, the next player clockwise takes their turn until all players have taken their turn. Then, the Active Player gives the Active Player Token (use whatever you want if you do not have an official Token Set) to the next player clockwise, who starts the new Game Round with their turn.

TURN ORDER

SPEND RATION AND DECIDE ON TURN ACTION

The party starts the adventure with 10 **Rations**. **At the beginning of a turn, the active player spends one Ration** (cross it on the ration bar) and then chooses one of these **Turn Actions**:

Name	Description
Travel	Roll a D100 and consult the Location Table .
Scavenge	The active player can make 3 SCAVENGE skill test to gain resource tokens. Consult the table below for what they can scavenge depending on the event type.

Visit Settlement	If the current passage is a Settlement, the party can visit it. See the table for Settlement Actions for available actions. The party can perform as many Settlement Actions as they wish whilst they are in town.
Rest	The party can recover 3 Energy per character.

RUNNING OUT OF RATIONS

If the party has run out of Rations, every character will lose 1 Energy per character every time a Ration should have been used.

TRAVEL

The party moves to a new location. **Roll a D100 and consult the Location Table.** This is the location and event that the party travel to.

Before reading the event text, the players can try to scavenge the newly discovered area once. Any character can do this, and this does not count as a normal skill check. *For more information, see “Scavenge” below.*

The active player then reads out the event text and then the party decides who tries to pass the skill check mentioned in the event. *Keep in mind that every character can only attempt one skill check per Game Round!*

On a successful test, consult the “**SUCCESS**” section of the event, on a failed test, consult the “**FAILURE**” section of the event.

Mark the event as **“SUCCESS”** or **“FAILURE”**. This is important at the end of the game for the party to earn additional experience points. There is a handy **Location Table** that you can use in the back of this book.

SCAVENGE

The party can use a character’s turn to perform 3 scavenge skill tests to gain the resource that is available in their current location. See the table below for information on which type of resource is available in which location type.

TABLE OF MAP TILE TYPES AND THEIR AVAILABLE RESOURCES

Event	Resource	Scavenge Test
Dungeon	Essence	Arcane + Lore
Settlement	Ore	Might + Crafting
Wilderness	Organics	Social + Nature

TABLE OF SETTLEMENT ACTIONS

If the party decides to spend the character’s turn to visit the active Settlement, they can perform all the below actions there. You can find more information about these activities under “Settlement Actions”.

Action	Description
Trade	The party can sell and buy as many items as they want.
Craft	The party can upgrade and enchant as many items as they want.
Full Rest	The party can recover all their lost Energy.

ENDING A TURN

When the active player has resolved the Turn Action, the next player clockwise can start their turn.

ENDING A ROUND

After all players have played their turn, the Game Round ends, and the Active Player Token is handed to the next person clockwise who now starts the next Game Round.

SETTLEMENT ACTIONS

TRADE

BUYING

The party can buy anything from the **Basic Item Table** in any settlement.

They can also spend 1 Gold from their stash to roll on the Advanced Item Table to see if the merchant has anything special. *This can only be done twice per visit.* The party will still have to buy the item for its listed price.

SELLING

Any Basic or Advanced Item can be sold for half of its price in Gold. So, the “Longsword” could be sold for 8 Gold.

Any Upgrade or Enchantment can also be sold for half of their resource cost in Gold.

CRAFT

The party can use their Upgrades and Enchantments to enhance their gear.

Looking at the Enchantment column of the item table, we can see that this Longsword costs 16 Gold (can be sold for half its price, or 8 Gold).

Upgrading it costs 8 Gold.

Enchanting it costs 4 Gold.

Looking at the “Exposing” Upgrade, we can see that it costs 8 Ore to upgrade an item with this card.

Looking at the “Fire-born” Enchantment we can see that it costs 4 Essence to enchant an item with it.

An item can only be Upgraded or Enchanted **once** unless it says otherwise on its card. You can **either upgrade or enchant** an item unless it says otherwise on its card.

Magic items can still be enchanted/upgraded once, their initial enchantment does not count towards its maximum number of upgrades/enchantments.

There is an optional Item Crafting System, explained in its own chapter. This system is meant for more experienced characters who are looking to create custom-tailored weapons and other proper equipment.

FULL REST

When the party enters a settlement, they can take a full rest in a local tavern and replenish all their Energy Tokens for 1 Gold.

ENDING A GAME SESSION

When the total amount of events has been played through, the game session ends. *You can start another one right away if you want, of course.*

When the session ends, roll as **many black D6** as you have **successfully completed events** and as **many red D6** as you have **failed events**.

Just like in a skill check, count the number of successes. This is the amount of bonus Experience Points that the party receive for this session. Do not multiply this by the “player number modifier”, as that is already figured in by the number of events.

COMBAT ENCOUNTERS

Some events will ask you to fight an Enemy, this will start a combat encounter.

STARTING A COMBAT ENCOUNTER

1. The active player consults the **Enemy Entry**.
2. The active player notes down the number of minions.
3. The active player notes down the number of **Enemy HP**.
4. Divide the minions equally among the characters, it is up to the players to decide who is attacked by which enemy.

There is a convenient Adventure Log in the very back of the document.

COMBAT ROUNDS

PLAYER ACTIONS

The player characters start the round. Every character can use one action per round.

At the beginning of their round, the active character can swap one piece of equipment with an item from their inventory. This does not count as their action.

Every character can attack one enemy, but the main enemy can only be attacked once all minions have been defeated.

There are also non-combat actions received from Items or Traits that use up an action.

ENEMY ACTIONS

Once all player characters have used their actions, the enemies will attack.

The character then rolls one defensive action per attacker to negate the incoming damage. Consult the table below, to see which attacks can be defended against by which defensive action.

Attack Type	Defensive Action
Melee	Defend (Shield), Evade, Defend (CC-Weapon)
Ranged	Defend (Shield), Evade
Magic	Evade

Keep in mind that only the main enemy has traits, their minions do not have any traits of their own, but they carry

over the Resistances/Vulnerabilities/Damage-Type of the main enemy.

COMBAT ACTIONS

PLAYER ACTIONS

SWAP GEAR

Swap one equipped item with another item from the inventory.

ATTACK

The player performs an attack test against the chosen enemy unit. If successful, they will do 1 point of damage (or more if they have more than one success or their weapon modifies the damage) to the target. Minions usually only have 1 Energy; main Enemies have as much Energy as what it says on their stats card.

Every character can only perform one attack per turn unless a card or trait says otherwise.

To determine what the character must roll for their test, consult the weapon that is used in the attack:

The Longsword uses the attribute MIGHT and the skill ONE-HANDED for its attack. The weapon does SLASHING DAMAGE.

This Frostbolt uses the attribute ARCANE and the skill MAGIC for its attack. The spell does COLD DAMAGE.

If the target of the attack is VULNERABLE to the weapon's damage type, the attack gains ADVANTAGE.

If the target is **RESISTANT** against the weapon's damage type, the attack suffers **DISADVANTAGE**.

DEFEND

The player performs a valid defense test against the attacking unit. If successful, they do not suffer damage. On failure, they will receive damage according to what it says on the enemy card (usually 1 for most enemies and minions).

If a character is resistant against the opponent's damage type, they receive **ADVANTAGE** on this roll.

A character can defend as many times as they are attacked in a combat round.

ACTIVATE ITEM

Some items can be used as **Combat Actions**.

COMBAT ENCOUNTER RESULTS

The encounter can end with the party being victorious or all characters being killed by the enemies.

If they are all killed, pick some other characters from the party's roster, and start a new game. Yes, all the character's loot and experience are gone. Better luck next time!

Even if only one character survives, the party is victorious. All characters who have been knocked out are back at 1 Energy. The active player follows these steps:

1. Note as many Gold as it says on the Enemy Card in the party's Gold Pool. If there are 3+ characters in the party, multiply the Gold reward by 2.

2. Note as many Experience as it says on the Enemy Card and place it in the party's Experience Pool. If there are 3+ characters in the party, multiply the XP reward by 2.
3. Follow any other instructions that are mentioned in the "Loot" part of the Enemy Card. Party size does not affect these rewards.
4. Resume the game where you left of.

Instead of a Basic Item, the party can also choose to loot an Upgrade. Instead of an Advanced Item, the party can choose to loot an Enchantment.

FLEEING FROM COMBAT

A character can flee from the current combat event by successfully performing an AGILITY + EVADE skill test as their combat action.

If all characters have fled from combat, the current Event counts as failed (this is true most of the case anyway when the characters are drawn into a fight).

DESTINY TOKENS

Destiny Tokens are what makes the player's characters special. The player can spend their Destiny Tokens when rolling for any skill or combat action test to reroll any positive dice they want. Only one Destiny Token can be spent on any test.

Destiny Tokens only refresh when instructed to by a card, by spending Global Clues or at the beginning of your next game session, so spend them wisely.

Every character starts with 2 Destiny Tokens. This is their maximum. When the character levels their first skill to 4D6, their maximum is raised by 1. When the character levels their first attribute to 4D6, their maximum is raised by 1.

ITEMS

There are three types of items: Basic Items, Advanced Items and Magic Items.

Every character can carry 2 proper items in their inventory. Proper items are weapons, armor and other items that can be wielded in a hand or equipped. Spells do not count as proper items. *Please note that there are items that enable characters to carry more items (backpacks).*

All other items do not count towards that limitation.

MAGIC ITEMS

When the game tells you that you gain a Magic Item, do the following:

1. Roll on the Basic or Advanced Items Table until you roll a proper item that can be upgraded or enchanted.
2. Roll on the Enchantment Table.
3. No resource costs need to be paid, just attach the enchantment on the item.

Magic Items are worth half of their combined Gold price and Resource price in Gold.

Enchantments and Upgrades are worth half of their Resource price in Gold.

DAMAGE TYPES

These are relevant during combat.

If the attacker is a Monster and the defender a Player Character, the player can gain ADVANTAGE on their defense roll if they have an item equipped that grants resistance against that damage type.

If the attacker is a Player Character and the defender a Monster, the Player Character can gain ADVANTAGE on their attack roll.

PHYSICAL DAMAGE TYPES

Caused by objects, such as weapons or stones.

SLASHING

Slashing damage is caused by cutting weapons or effects, delivering precise and often deep wounds to targets, typically associated with swords, axes, and claws.

PIERCING

Piercing damage is inflicted by pointed weapons or effects, puncturing, and penetrating through armor or flesh, commonly associated with arrows, daggers, and spears.

CRUSHING

Crushing damage is dealt by blunt force weapons or effects, causing trauma by compressing and bruising tissue, often linked to hammers, maces, and falling objects.

POISON

Poison damage is inflicted through toxic substances and venoms, weakening, debilitating, and potentially spreading deadly effects over time, often linked to snakes, alchemical concoctions, and venomous creatures.

ELEMENTAL DAMAGE TYPES

Caused by magic and the environment.

FIRE

Fire damage results from intense heat and flames, scorching, burning, and potentially igniting targets, frequently associated with spells, torches, and fiery creatures.

COLD

Cold damage stems from extreme low temperatures and icy effects, freezing, chilling, and potentially slowing targets, often linked to ice spells, wintry environments, and frosty beings.

DIVINE

Divine damage emanates from holy or sacred sources, smiting and purifying targets with celestial or godly energy, commonly associated with clerics and divine spells.

ELECTRICITY

Electricity damage is produced by powerful electrical charges and effects, shocking, jolting, and potentially paralyzing targets, typically associated with lightning, charged spells, and electric creatures.

SHADOW

Shadow damage arises from dark and ethereal forces, sapping, corrupting, and obscuring the essence of targets, often linked to necromancers, shadowy realms, and creatures of the night.

ARCANE

Arcane damage is derived from raw magical energies and mysterious forces, disrupting and warping the very fabric of reality, commonly associated with mages, ancient spells, and arcane artifacts.

ITEM TRAITS

ACTION, DISCARD: ESCAPE ENCOUNTER

This item can be used as a combat action to flee from the current encounter.

ACTION, DISCARD: PULL TARGET (RANGE IN TILES)

ONLY USED IN THE COMBAT EXPANSION

This item can be used as a character's combat action. When discarded, an enemy unit that could otherwise not be attacked can be attacked this round (like the main enemy or a minion engaged to another character).

AOE (NUMBER IN TILES)

ONLY USED IN THE COMBAT EXPANSION

The item's effect carries over to minions of the given amount.

DEFEND ADVANTAGE

The wielder of this item gains advantage on all Defend tests.

DEFEND RANGED

This item enables the wielder to Defend against non-magical ranged attacks.

BULKY

The wearer of this item can't roll Stealth tests.

DAMAGE TYPE RESISTANCE

The wielder of this item gains advantage on defense rolls against the given damage type.

DAMAGE UNDEAD

This item can be used to damage undead creatures as if it were an offensive item.

DAMAGE UNDEAD AOE (RADIUS IN TILES)

This item can be used to damage all undead creatures within the given tile radius as if it were an offensive item.

DISCARD: ADVANTAGE (ATTRIBUTE)

(NUMBER OF TOKENS)

This item can be used at any time to receive the given number of Advantage Tokens. If an attribute or skill is mentioned,

these tokens can only be used for test involving this skill/attribute.

DISCARD: ADVANTAGE (SKILL)

This item can be used before rolling a corresponding skill test to give the actor advantage on the test.

DISCARD: DEAL +X DAMAGE ON HIT

This item can be discarded when you deal damage to raise the damage by the given amount.

DISCARD: DRAW X MAP CARDS AND CHOOSE ONE WHEN EXPLORING

When travelling to a new tile, draw X amount of Map Tiles instead of just 1 and choose which one you like best. Shuffle the other drawn cards back into the Map Tile Deck.

DISCARD: SCAVENGING (NUMBER OF ATTEMPTS)

This item can be used when scavenging to gain the given number of additional attempts.

DISCARD: GAIN X RESOURCE

Discard this item at any time to receive the number of resources.

DISCARD: GAIN X RESOURCE FROM SCAVENGING

Discard this item when a character has successfully scavenged to gain the additional number of resources.

DISCARD: GAIN X ADDITIONAL ENERGY
WHEN RESTING

Discard this item when Resting to receive the additional number of Energy for this character.

DISCARD: RESTORE X ENERGY

Discard this card at any time to instantly restore the given amount of Energy.

ENCHANT (NUMBER OF SLOTS)

This item can be enchanted as many times as given.

GAIN ADVANTAGE (NUMBER OF TOKENS)
[ATTRIBUTE|SKILL]

The effect of this items bestows the given number of **Advantage Tokens** to the target character, which will be used in the next rolls. Some

HEAL (NUMBER OF ENERGY POINTS)

The effect of this item restores the given number of energy points to the target.

IMMOBILE

ONLY USED IN THE COMBAT EXPANSION

This item can't be used if the character has moved in their movement phase.

INVENTORY SPACE (NUMBER OF SLOTS)

This item can be equipped on the Back slot and raises the number of items that the character can carry by the given amount.

LARGE

This item needs to be used in both hands. Melee weapons also do +1 damage.

REACH (NUMBER OF TILES)

ONLY USED IN THE COMBAT EXPANSION

Some melee weapons can be used on non-engaged opponents.

RESTRICTING

The wearer of this item can't roll Stealth and Evade tests.

STRAINING (NUMBER OF ENERGY POINTS)

Using this item will reduce the Energy of the character by the given number of points.

USE: RESTORE X ENERGY

Can be used to restore the given amount of energy points to the target character.

ENEMY TRAITS

AGILE

ONLY USED IN THE COMBAT EXPANSION

Can attack even when they are not engaged to the target.

AOE (NUMBER OF CHARACTERS)

When they hit a target, they also hit the given amount targets in the party.

ARMORED (1-4)

Attack tests against this unit receive a negative die according to the given level.

DEFENDER (1-4)

Attack tests against this unit receive a negative die according to the given level.

CAMOUFLAGE (1-4)

Defense tests against this unit receive a **negative die** according to the given level.

CHARGE (NUMBER OF TILES)

ONLY USED IN THE COMBAT EXPANSION

The unit can use their action to charge a character within the given radius. This does not count as an attack.

DRAINING

When the unit hits a character, roll a red D6. On a 6, the unit heals itself by draining the hit character.

EVASIVE

When this unit is hit, roll a red D6. On a 6 the unit has evaded the incoming damage.

FOCUS (PRIMARY ROLE > SECONDARY ROLE > TERTIARY ROLE)

These units will focus the given role when choosing who to attack in the given round.

ILLUSIONS

Attacks against this unit are always at disadvantage.

KNOCKDOWN

When this unit damages someone, roll a red D6. On a 6, the target will be knocked prone and can't attack in their next turn, unless they pass an AGILITY + EVADE test at the beginning of their turn.

MAGIC DEFENSE (WARDING) (1-4)

Magic attack tests against this unit receive a negative die according to the given level.

PARRY

When this unit takes damage from a melee attack, roll a red D6. On a 6 the unit will have parried the attack.

PETRIFYING

On the beginning of its turn, the unit will roll a red D6. On a 6 the unit will have paralyzed the closest character, who must skip their next turn.

PHASING

ONLY USED IN THE COMBAT EXPANSION

Units with this trait can move through solid objects like walls and furniture.

POISON (NUMBER OF TURNS)

When this unit hits a target, the target will be poisoned for the given number of turns. They will receive 1 damage at the start of their turn.

PULL (NUMBER OF TILES)

ONLY USED IN THE COMBAT EXPANSION

The unit can use their action to pull an enemy within the given radius next to them.

RANGED (NUMBER OF TILES)

Can attack for the given number of times before the actual combat starts.

REGENERATES (AMOUNT OF ENERGY)

This unit rolls the number of given dice at the start of their turn, for every success the unit restores 1 Energy.

RESISTANT (DAMAGE TYPES)

Attack tests of the given damage type receive disadvantage against this unit.

RIPOSTE

When this unit takes damage from a melee attack, roll a red D6. On a 6 the unit will have riposted the attack. The original attacker must make a defense test or receive damage.

SECOND WIND

When this unit is reduced to 0 Energy, roll a red D6. On a 6 the unit will regain 1 Energy immediately.

SLOW

ONLY USED IN THE COMBAT EXPANSION

This unit can't engage and attack in the same turn.

STUNS

When this unit damages someone, roll a red D6, if it comes up as a success, the target must skip their next turn.

TERRIFYING

On the beginning of its turn, the unit will roll a red D6. On a 6 the unit will have terrified the closest character, who must use their next full turn to move as far away from the unit as possible.

TOUGH

When this unit takes damage, roll a red D6. On a 6 the unit has mitigated the incoming damage.

UNLEASHED

This unit is immune to all crowd-control effects.

VULNERABILITY (DAMAGE TYPES)

Attack tests of the given damage type receive advantage against this unit.

CLUES

GLOBAL CLUES

Global Clues can be found by completing Settlement, Dungeon and Overland events and they can be used for several things (see below).

LOCAL CLUES

Local Clues are needed to complete a quest. The quest description will tell you how many clues are needed to

complete the quest. Global Clues can be exchanged for Local Clues with a ratio of 3 to 1.

GLOBAL CLUE USES

Action	Description	Cost
Find rations	The clue hints at a hidden cache that contain rations. Up to 3 clues can be used to gain up to 3 rations.	1
Exchange for Local Clue	The clues hint at a mystery in your current quest. You can exchange 3 Clues for 1 Local Clue.	3
Exchange for Destiny Token	The clues hint at one of the character's personal backgrounds. You can exchange 5 Clues for 1 Destiny Token.	5
Upgrade loot	The clues hint at a powerful artifact. When drawing loot, you can spend Clues to upgrade the type of loot.	See table below
Redraw Event	The clues hint at an alternative solution to your current problem. Draw another card of the same type.	3
Redraw Enemy	The clues hint at an alternative opponent, that might be easier to defeat.	5
Find Lair	The clues hint at a monster lair in the vicinity of the	3/5/7 for easy,

	party. Roll on the Monster Table and start a combat encounter.	medium, hard
--	--	--------------

LOOT UPGRADE CLUE COST

Loot Type	Description	Cost
Basic	If the loot contains no items, you can make it contain a basic item.	3
Advanced	If the loot contains a basic item, you can upgrade that to an advanced item.	5
Enchantment	If the loot contains an advanced item, you can upgrade that to an Enchantment.	7
Magic	If the loot contains an Enchantment, you can upgrade that to a Magic Item.	10

CRAFTING SYSTEM

GRIMLORE features an optional crafting system that enables more experienced characters to create items that they deconstructed before.

Once a character has levelled their Crafting skill to 3, they are able to deconstruct any proper item (those that have an upgrade and/or enchantment cost) to learn how to craft this item. Magic items cannot be deconstructed. To deconstruct an item, the character must be in a friendly settlement.

Remove the deconstructed item from the character. From now on, when the character is in the Portal Complex (start of the session) or in any friendly Settlement, they can construct that item from scratch by spending resources.

The resource cost is determined by the Upgrade & Enchantment cost of the item.

For instance, a Dagger (2 Ore to upgrade) will cost 2 Ore to craft.

Another example, a Battleaxe (8 Ore to upgrade, 4 Essence to enchant) will cost 8 Ore and 4 Essence to craft.

The character now rolls a MIGHT & CRAFTING skill check to determine the quality of the created item. For every 6 on this roll, the item's Upgrade or Enchantment slots increases by 1. This is up to the crafter to decide. Crafting will allow you to mix and match Upgrades and Enchantments (only if the item can be enchanted to begin with).

If they do not roll any 6s, the item is flawed. It can still be used, but it cannot be upgraded or enchanted, not even once.

Example, our character has rolled two 6s on their Dagger crafting. The Dagger can be upgraded 2 times in total (daggers can't be enchanted).

On crafting a Battleaxe, our character has rolled three 6s. They decide to make this a special item that can be upgraded once and enchanted twice for a total of 3 enhancements.

On crafting a Light Hammer, our character has rolled no 6. The Light Hammer can still be used, but it cannot even be upgraded once, unlike a found Light Hammer would.

Crafted items can be sold. Flawed items are only worth a fourth of their price (down from half for a normal item). For every additional Upgrade/Enchantment slot, raise the sell price of the item by 2 Gold pieces, so the Battleaxe in our example with 3 additional slots can be sold for 14 Gold (8 for the item (price of 16 divided by 2) plus 3x2 Gold for the additional slots).
